Apr 12, 2026	0.75"	0.75"	0.75"	0.75"	75%

Confidence is the likelihood that hail of at least 0.75" occurred at this specific property, combining radar strength at the address, hour-by-hour storm-track proximity, and ground observations; percentages reflect the measured historical rate at which days with the same evidence profile verified. Ground-confirmed marks days corroborated by an independent surface observation (NOAA Storm Events, SPC, NWS Local Storm Reports, or a CoCoRaHS hailpad). Close-range radar (At location / Within 1 mile) is available from October 2020 onward. Radar-derived size is an estimate, not a direct observation. This report is a weather-history aid and is not a coverage, causation, damage, or repair-scope determination. Sources: NOAA MRMS radar, NOAA Storm Events, SPC, NWS Local Storm Reports, CoCoRaHS.
